1. 考试大纲

Assessment methods

The final exam will consist of a project work to be presented/defended with the teacher. Students will work in small teams (typically 3 members), choosing a realistic domain or problem that can be modelled, investigated, evaluated, and published on the Web.

The choice will be guided by the teacher and the tutor, who will also accompany the teams in their work when needed. The work should be fairly spread among the members, and motivated during the exam presentation.

AI can be a useful tool to support individual study with in-depth analysis, summaries, and self-assessment. As for learning assessment, the exam may consist in a section that can exploit substantial use of AI (problem solving, content generation), accompanied by a mandatory critical analysis section.

Students with disabilities and Specific Learning Disorders (SLD)

Students with disabilities or Specific Learning Disorders are entitled to special adjustments according to their condition, subject to assessment by the University Service for Students with Disabilities and SLD. Please do not contact teachers or Department staff, but make an appointment with the Service. The Service will then determine what adjustments are specifically appropriate, and get in touch with the teacher. For more information, please visit the page: <https://site.unibo.it/students-con-disabilita-e-dis/en/for-students>

教授联系方式

学生将掌握知识表示和提取的基础知识，这些知识旨在以适合机器查询、自动推理和通用推理的数据形式呈现。课程涵盖以下主题：

- 知识表示作为计算逻辑方法 (知识图谱、本体设计模式、描述逻辑、链接数据框架)
- 知识抽取是一种适合方法，它结合了基于规则的启发式方法 (例如网络爬虫、语言模式识别、基于图的数据分析) 和统计方法 (例如生成式人工智能模型)，用于从任意内容中抽取数据。
- 本文将从基础性 (哲学、认知) 视角以及最优地满足面向任务的需求两个方面来介绍表示和提取。
- Web 和生成式人工智能模型将作为计算平台，用于学习、测试和应用所学方法，并以多个领域为例，重点关注社会科学和人文科学。
- 课程中将介绍多个软件组件，以便学生熟悉语义技术。

上课的主要内容↑

历届学生作品↓

- 一、核心考核形式
- 期末考试以小组项目 + 答辩的形式进行：
- 学生需组成 3 人左右的小组，选择一个真实领域或问题进行建模、调研、评估，并最终发布到网页上。
- 选题由老师和助教指导，过程中也会提供必要的协助。
- 要求小组成员分工均衡，并在答辩时清晰说明各自的工作贡献。
- 二、AI 工具使用规则
- AI 可用于辅助个人学习 (如深度分析、内容总结、自我测评)。
- 考试中可能包含大量使用 AI 的环节 (如问题解决、内容生成)，但必须搭配强制性的批判性分析部分 (需要你写 AI 呈现的内容进行反思和评估)。
- 三、特殊学生支持
- 针对有残疾或特定学习障碍 (SLD) 的学生：
- 可根据自身情况申请特殊调整，但需先通过大学残疾与 SLD 学生服务处评估，不可直接联系任课老师或系里工作人员。
- 服务处评估后会确定合适的调整方案，并与老师沟通。

考试大纲与评估方法↑

2. 我的思路

LYM:

背景：

根据workflow 和组员1 做的背景介绍，主题选择，已经方法论理论框架啥的。然后小组有三人，我主要做的是step3, step4 就是知识representation这一块的内容。

存在的主要问题：

- Representation 提取 的概念厘清与连接**
在知识图谱构建中，这两个概念有着严格的先后顺序和逻辑关系：
 - Representation (知识表示)**：指的是构建 T-Box (本体图)，也就是设计本体模型 (类、属性、值域) 的过程。这应该是核心逻辑前置。
 - Extraction (知识抽取)**：指的是利用工具 (如 SPARQL, LLM, 爬虫) 从原始数据 (网页、数据库、文本) 中提取信息并设计成符合 T-Box 要求的三元组。在你们项目中，原本应该是先做 Representation (设计本体图)，然后再做 Extraction (利用工具从数据中提取三元组)。现在你们颠倒了顺序，这会导致逻辑上的混乱和效率低下。
- SPARQL 检索的复杂性**
SPARQL 是一种查询语言，它的作用是用来检索本体图 (Representation) 中的三元组 (Extraction) 是否满足特定的查询条件 (Competency Questions)。它不是用来设计本体图的。
- LLM 模型的应用场景**
LLM 模型可以用于生成文本、回答问题、进行推理等。在你们的场景中，LLM 可以用于生成关于 T-Box 的元数据或辅助解释，但不能直接用来设计本体图。

Step 1: 理论基础知识与要求分析 (Requirements & Competency Questions)

- 动作**：明确我们理解为什么需要 T-Box。
- 内容**：
 - 明确需求：为什么需要 T-Box？需求是什么？
 - 明确数据：从哪里获取数据？数据是什么？
 - 明确问题 (Competency Questions, CQs)：这里基本设计好的本体图，列出你们需要解决哪些问题？
 - CQ 示例 1：哪些本体图在逻辑上是由本体图 T-Box 推导出来的？
 - CQ 示例 2：哪些本体图在逻辑上是由本体图 T-Box 推导出来的？

Step 2: 知识表示与本体图设计 (Knowledge Representation & T-Box Design)

- 动作**：不能具体数据，同时设计本体图 (T-Box)。
- 内容**：
 - 核心模式 (Core Patterns)**：描述你们使用的本体图设计模式，例如你们设计好的本体图。
 - 本体图设计 (Ontology Design)**：描述你们设计的本体图，包括类、属性、值域。
 - 本体图设计 (Ontology Design)**：描述你们设计的本体图，包括类、属性、值域。
 - 逻辑公理与规则 (Logical Axioms & Rules)**：描述你们设计的本体图，包括类、属性、值域。

Step 3: 多模态知识抽取与数据集成 (Multimodal Extraction & Data Population)

- 动作**：使用工具设计好的 T-Box 本体图，从数据中提取三元组。
- 内容**：
 - 数据源介绍：你们收集了多少数据？数据是什么？
 - 抽取方法 (Extraction Methodology)：在这里展示你们如何提取三元组 (LLM, SPARQL, 爬虫, 数据库)。
 - 抽取方法 (Extraction Methodology)：在这里展示你们如何提取三元组 (LLM, SPARQL, 爬虫, 数据库)。
 - 抽取方法 (Extraction Methodology)：在这里展示你们如何提取三元组 (LLM, SPARQL, 爬虫, 数据库)。

Step 4: 知识表示与推理 (SPARQL Querying & Ontology Inference)

- 动作**：用 SPARQL 查询你们设计好的本体图，回答 Step 1 提出的问题。
- 内容**：
 - 查询设计与执行：你们设计的 SPARQL 查询以及查询结果。
 - 推理与验证：你们设计的推理规则以及推理结果。
 - 推理与验证：你们设计的推理规则以及推理结果。

Step 5: 项目总结与反思 (Conclusion & Discussion)

- 动作**：总结你们的项目，反思你们的项目。
- 内容**：
 - 项目总结：你们的项目，反思你们的项目。
 - 项目总结：你们的项目，反思你们的项目。

WishGraph

An Ontology of Cyber-Wishing, Digital Platforms and Materialized Rituals

Home Page

- Project Introduction
- Network and Cultural Background
- Theoretical Framework
- Ontology Scope and Structure (这一部分需要详细阐述)
- Competency Questions
- Methodology

WishGraph is a collaborative ontology project that examines cyber-wishing as a platformed digital ritual within contemporary Chinese internet culture. It studies how everyday practices are transformed into meme-based practices of wishing, blessing and effective participation. The project studies various online ritual forms, such as online petitions, cyber rituals, ritual symbols, digital practices and platforms. These practices show an older form of wishing, blessing, devotion, amulet use and daily worship, while adapting them to the participatory environment of digital platforms. This project understands cyber-wishing as a culturally

1.1 What is Cyber-Wishing?

Cyber-wishing refers to online practices in which users seek luck, protection, success, wealth, health, romance, safety and emotional resonance through digital rituals, objects and platform interactions. It appears through repeated lucky images, comments such as "receive good luck," daily-themed wishes, blessing wallpapers, "Wish Bookmarks" memes, online donation tools and meme-based platform challenges. These practices show an older form of wishing, blessing, devotion, amulet use and daily worship, while adapting them to the participatory environment of digital platforms. This project understands cyber-wishing as a culturally

W WishGraph.docx

核心思路：设计的“理论骨架”（T-Box）填充为具有实际数据的“血肉实例”（A-Box），并最终通过技术手段验证项目的核心价值。

工作流程动作：

Step 3: 多模态知识抽取与数据填充 (Multimodal Extraction & A-Box Population)

这一步的核心是将非结构化的 Meme（梗图）和社交媒体文本转化为计算机可理解的结构化数据。

。 +2

1. 数据集准备与分类：

- 基于文档中提到的 **4P 框架**（**Person, Process, Product, Press**），你收集并整理了包含“锦鲤、转发链、神祇头像、在线占卜”等表现形式的原始素材。 +1

2. 多模态抽取方法论 (Extraction Methodology)：

- **AI 辅助提取：**利用 LLM（如 Claude/ChatGPT）对复杂的图文对象进行多维度拆解。例如，从一张“Offer 菩萨”的图中识别出其对应的 **Person**（求职者）、**Pressure**（面试焦虑）以及 **Digital Practice**（转发/还愿）。 +1
- **Prompt 工程与转换：**你设计了特定的 Prompt，引导 AI 将描述性文字转换为符合本体定义的 JSON 格式，并最终映射为 **RDF 三元组**。 +1

3. 实例实例化 (Instantiation)：

- 在 Protégé 等工具中，为每一个具体的赛博祭祀案例创建 **CyberWishingCase** 实例。 +1
- **映射关系对照：**按照 CSV-to-Ontology 的逻辑，将 CSV 中的各个字段（如 Platform, Ritual Symbol）连接到本体中定义的类和属性上。 +1

Step 4: 知识查询与洞察 (SPARQL Querying & DH Insights)

Step 4: 知识查询与洞察 (SPARQL Querying & DH Insights)

这一步是通过技术手段验证 Step 1 提出的能力问题 (Competency Questions, CQs)，并从中提炼人文结论。  +1

1. SPARQL 查询设计与执行:

- 验证 CQs: 你需要编写针对性的 SPARQL 代码来回答预设问题。 
- 例如针对 CQ1 (用户与压力): 查询哪些类型的用户更倾向于使用哪种“赛博法器”来缓解特定压力。 
- 针对 CQ2 (传统与数字转化): 查询“财神”或“文昌帝君”等传统符号是如何演变为头像、壁纸或在线界面的。  +1

2. 数据结果可视化与分析:

- 通过查询结果展示不同平台 (如小红书、微博、B站) 上的祭祀行为差异。 

3. 数字人文 (DH) 洞察提炼:

- 现象解读: 解释查询结果背后的文化深意。例如, 发现职场相关的赛博祭祀更偏好带有“效率/金钱”属性的改版神像, 这反映了当代都市青年在高度竞争环境下的社会心态。  +1
- 从功能到情感: 分析这些数字实践如何从单纯的“玩梗”转化为具有情感慰藉功能的“Affective Practice”。  +1

总结: 你的部分如何与整体对齐

- 承上: 你根据文字同学在 Step 1 & 2 中定义的 4P 理论框架、核心实体类 (如 `CyberProduct`, `AffectiveFunction`) 以及 CQs 来指导你的抽取和查询方向。  +1
- 启下: 你的查询结果和人文发现为 Step 5 (项目总结与反思) 提供了实证数据支持, 使关于“亚文化隐喻”和“语义对齐冲突”的讨论不再是空谈。 

通过这种方式, 你将抽象的宗教社会学理论转化为了一个可交互、可查询的数字民俗知识图谱。  +1

最后输出:

参考的是别人的作业结构是这样的: 主要分成了前置内容+ 提取 +representation (ontology), 而我做的部分就是提取并且sparql可分析查询这样。 最后我们是做一个网页来进行汇报, 把所有过程文件都放在github上之类的。

因针对分工，我的部分就是建立网页，框红的部分就是我要输出的step3+step4的部分，我们就建立一个Knowledge representation 这样的大网页，然后再根据我的step3 step4 来输出成两个可跳的内容章节。因此你做的内容最后呈现为 knowledge representation.html，到时候我再结合其他组员自己的html合起来就行。

更多背景帮助理解：

Q1:

Q：我们收集的数据究竟只是meme图片还是图片+评论转发的文字？因为提到了转发链？头像是不是就是图片？评论区的文字也是需要收集的样本？

A：因为要对这些数据进行处理的人是我，然后对于我而言，我要的是图片，文字就不用了，里面提到的转发链路，评论，也可以截图评论的内容（截图就肯定包括了作者的头像名字评论内容了）。也就是说要两个东西。1. 赛博的图 2.转发链的截屏。

因为后续我要用 AI 对图进行提取文字，并且做成 prompt工程转化 根据rdf三元组关系用Jason格式储存 已备我后续用

1. 为什么“截图”是正确的选择？

在数字民俗（Digital Folklore）的研究中，单纯的文本会丢失极其重要的语境信息：

- 平台特性 (Platform)：截图保留了 UI 界面，能一眼识别是小红书、微博还是朋友圈，这对应了本体中的 circulatesOnPlatform 关系。
- 数字实践 (DigitalPractice)：转发链的截图不仅有文字，还展示了“转发”、“点赞”和“层级关系”，这正是本体要捕捉的“实践行为”。
- 视觉符号 (RitualSymbol)：头像、表情包里的特殊符号（如锦鲤、符咒、特定的排版）在截图中被完整保留。

2. 数据与本体实体的映射逻辑

当你拿到一张截图并交给 AI 处理时，你的 Prompt 应该引导 AI 提取出以下符合本体框架的字段：

截图中的内容	对应的本体类 (A-Box 填充)	提取意义
博主/评论者的身份	Person	识别是“打工人”、“学生”还是“求职者”。
Meme 图片本身	CyberProduct	赛博财神、电子木鱼或保过符。
评论/转发的文字	Pressure / AffectiveFunction	从而推断背后的“焦虑感”或“希望感”。
转发链的结构	DigitalPractice	体现“转发链”这一特定的平台动作。
图片中的视觉标记	RitualSymbol	识别红底金字、锦鲤等视觉元素。

Export to Sheets

2. 我们的网页的内容的饱满程度应该如何？

4. Knowledge Representation

To find the Turtle file of our ontology, navigate to the [Github repository](#).

4.1 The Ontology

Our ontology formalizes aesthetics as complex cultural entities that emerge through community-driven creative processes on digital platforms. By modeling their characteristic elements and behavioral patterns, we can better understand how contemporary aesthetics differ from traditional subcultures in their formation and dissemination, and how they offer new popular ways of being creative through the reuse and recontextualization of past creative products.

Aesthetics are abstract, dynamic, and modern concepts. With our ontology, we aim to map their characteristic elements, relevant behaviors, and the creative processes involved in their creation and dissemination. The previous chapters introduced three theoretical frameworks that helped us create these focus points and position these intangible cultural commodities within creative theory.

There have been numerous resources classifying what belongs to an aesthetic and what does not. For example, we made deliberate use of the independent, crowd-sourced [Aesthetics Wiki](#) for identifying features of our selected aesthetics. Essentially, this classification task represents the genesis of aesthetics themselves. Aesthetics inherit from their 'parent class' of Subcultures the practice of inclusion and exclusion. This practice operates through various cultural forms such as art, music, and clothing, often based on ethnicity, interests, and social background.

Undeniably, these types of social groupings are extremely similar. Yet recent aesthetics such as Clean Girl, Y2K, and Dark Academia demonstrate distinctive characteristics through *Metaconvergence*. This term is coined in the earlier mentioned [CreOn ontology](#) and has become an increasingly popular method of expressing creativity on digital platforms. To clarify this concept within our framework, we interpret the term in our ontology core as follows:

"Metaconvergence is the process by which individuals or groups combine elements from multiple subcultures or aesthetics to create new, hybrid forms of expression. This phenomenon is particularly prevalent in digital spaces, where the rapid exchange of ideas and cultural artifacts facilitates the blending of diverse influences. Metaconvergence allows for greater creativity and innovation, as individuals draw upon a wider range of sources to inform their aesthetic choices. It also reflects the fluid and dynamic nature of contemporary culture, where traditional boundaries between subcultures are increasingly blurred."

Bricolage, a creative technique within our CreativeProcess class, appears similar to the Montage and Collage art techniques that gained significant popularity during the Dada art movement in the first half of the twentieth century. Reusing existing visual elements is not an uncommon phenomenon in art and creativity. However, contemporary aesthetics like Y2K operate differently. Y2K's reproduction of a 2000s 'aesthetic' evokes particular emotions such as nostalgia or a sense of belonging to a period that users may have never even experienced. Creative products from the past are recontextualized at rapid speed, not just by one dominant artist but by an anonymous web community. Often, the motive is not protest against dominant culture but rather a means to gain acknowledgment for stylistic efforts and to shape identity.

From here, with our ontology, we aim not only bring aesthetics into existence but also formalize the specific creative processes present in their emergence. It is valuable to move beyond understanding aesthetics as predominantly formalistic subcultures. Instead, we can observe how they facilitate a modern, grassroots, community-driven approach to identity formation and art making.

We initially selected six aesthetics and adapted our model to their characteristics: **Y2K, Cottagecore, Dark Academia, Grunge, Old Money and Clean Girl**. Our selection aimed to cover a variety of aesthetics that address different temporal contexts and demonstrate distinct creative phases. Notwithstanding, we recognize that there is considerable overlap since their usage and emergence occur around the same time period. Therefore, our analysis will show that most of them use the same types of media channels to disseminate the aesthetic. This shared infrastructure highlights the interconnected nature of contemporary aesthetic movements and their collective reliance on digital platforms for expression and growth.

4.2 Modeling

In this section we will describe how we used LLMs to model our ontology using a bottom-up extreme design methodology and CLOWN. During this phase, we systematically generated definitions, descriptions, and user scenarios for each aesthetic. This generated content informed the development of competency questions, which provided the structural foundation for constructing the ontology.

4.2.1 User story & LLMs

First step: Context and Literature State of the Art (CLOWN).

Our search for a model started by searching for interesting concepts that should be defined in the model. Here are some examples of the prompts we fed to the LLM and the output it provided us.

👤 Please give a definition of an "aesthetic."

🤖 An "aesthetic" refers to a set of principles or philosophy concerning beauty, art, and taste. It encompasses the study of what makes something beautiful, pleasing, or artistically valuable. The term can be used in several ways:

- As a noun: An aesthetic is a particular style, approach, or set of principles that defines what is considered beautiful or artistically appealing within a specific context. For example, "the minimalist aesthetic" emphasizes simplicity and clean lines, while "the vintage aesthetic" draws on nostalgic elements from past eras.

aesthetic" draws on nostalgic elements from past eras.

- In philosophy: Aesthetics is the branch of philosophy that examines the nature of beauty, art, and artistic judgment. It explores questions like what makes something beautiful, how we experience and evaluate art, and what constitutes good taste.
- In everyday usage: People often use "aesthetic" to describe the overall visual style or mood of something - whether it's fashion, interior design, social media posts, or any curated visual presentation. In this context, it's become somewhat synonymous with "style" or "vibe."

👤 Please give me 10 examples of aesthetics.

👤 Here are 10 examples of aesthetics:

1. Cottagecore
2. Fairycore
3. Dark Academia
4. Goblincore
5. Vaporwave
6. Y2K/Cyber Y2K
7. Heroin Chic (90s)
8. Minimalism
9. Cyberpunk
10. Weirdcore

When we arrived at our selection of six aesthetics (**Y2K, Cottagecore, Dark Academia, Grunge, Old Money** and **Clean Girl**), we aimed to explore its interpretation of these phenomena further.

👤 Please give me a description and user scenario for our selection of aesthetics.

👤 An "aesthetic" refers to a set of principles or philosophy concerning beauty, art, and taste. It encompasses the study of what makes something beautiful, pleasing, or artistically valuable. The term can be used in several ways:

1. Y2K (/Cyber Y2K)

Metallic silver textures, holographic materials, frosted plastics, bright blues and pinks, bubble shapes, futuristic fonts, digital camera aesthetics, low-resolution graphics, and late 90s/early 2000s technology references. Think iMacs, flip phones, and optimistic digital future vibes.

User scenario: Jamie, a fashion content creator, embraces Y2K revival as both personal style and career strategy. She documents their thrift shopping for vintage tech accessories, creates makeup tutorials using holographic eyeshadows, and attends events in futuristic outfits. This lifestyle positions them at the forefront of nostalgic fashion trends, appeals to their Gen Z audience's desire for optimistic futurism, and creates endless content opportunities around Y2K nostalgia.

2. Dark Academia

Characterized by gothic architecture, vintage books, candlelit libraries, classical art, and muted colors like deep browns, forest greens, and burgundy. Think old university halls, typewriters, and scholarly pursuits with a moody, intellectual atmosphere.

User scenario: Graduate Student's Daily Routine Sarah, a philosophy PhD candidate, structures her lifestyle around Dark Academia principles. She wakes early to write in leather-bound journals by candlelight, wears vintage blazers and wool sweaters to campus and spends evenings in dimly lit libraries or coffee shops reading classical literature. This lifestyle helps her feel connected to intellectual traditions, provides motivation for her rigorous studies, and creates a romantic narrative around academic pursuits that might otherwise feel isolating.

3. Cottagecore

Emphasizes rural, pastoral life with floral patterns, vintage dresses, wildflower bouquets, cozy cabins and soft, natural lighting. Colors include cream, sage green, dusty pink, and earth tones that evoke a romanticized countryside lifestyle.

User scenario: Remote Worker's Life Shift Marcus, burned out from corporate life, adopts cottagecore living while working remotely as a freelance graphic designer. He moves to a small town, starts each day by tending his vegetable garden, bakes his own bread, and takes work breaks to forage for mushrooms. He wears linen shirts, shops at farmers markets and hosts dinner parties featuring homegrown ingredients. This lifestyle provides stress relief, reconnects him with natural cycles, and gives him a sense of self-sufficiency that balances

ingredients. This lifestyle provides stress relief, reconnects him with natural cycles, and gives him a sense of self-sufficiency that balances his digital work life.

4. Clean girl

Lifestyle aesthetic, including heavy consumerism. It is a recent fashion and lifestyle microtrend characterized by a minimalist and refined approach to beauty and style. It originated as a popular trend on TikTok and Instagram around 2023. The "Clean Girl" trend has been adopted and popularized by influencers and celebrities like Hailey Bieber, who frequently show minimalist outfits and polished, "effortless" appearances. It largely overlaps with That Girl and Vanilla Girl.

User scenario: Emma, a 22-year-old marketing professional, adopts the Clean Girl aesthetic to cultivate a polished, effortless image for her new city life. She browses TikTok and Instagram for inspiration, purchasing minimalist staples like gold hoops and neutral loungewear. Emma films her simplified morning routine showcasing dewy skin and slicked-back hair, sharing it with trending audio. Through consistent posting, she gains social validation and refines her personal brand.

5. Old Money

Emulates understated elegance of generational wealth through tailored blazers, polo shirts, penny loafers, silk scarves, and pearl jewelry in neutral palettes. Emphasizes "quiet luxury" with timeless pieces and minimal logos. Associated with tennis, golf, yachting, and horseback riding. Often functions as performative facade—curating an image of inherited wealth through thrifted designer pieces and "elevated" hobbies regardless of actual economic status.

User Scenario: Sofia, a 22-year-old marketing coordinator, curates an "old money" persona on social media. She thrifts vintage Ralph Lauren, learns tennis at public courts, and photographs herself at free museum days. For Sofia, this aesthetic signals refinement and social capital through styling alone, offering comfort of appearing "established" while teaching her about quality and timeless taste.

6. Grunge

Grunge is an aesthetic rooted in the early 1990s alternative music scene, particularly from Seattle. It rejects mainstream polish and consumerism, embracing imperfection, rebellion, and authenticity. The style features flannel shirts, ripped jeans and layered thrifted clothing in muted or dark tones. Its visual language is raw and unkempt.

User Scenario: Eli, a 20-year-old art student, expresses his grunge aesthetic through worn-out denim, oversized plaid shirts, and secondhand band tees. He frequents local record stores, sketches in cafés, and documents the city's forgotten corners on film. For Eli, grunge isn't just a fashion choice—it's a way to resist conformity and find beauty in imperfection, using art and style as an outlet for frustration and self-discovery.

4.2.2 Classes and properties

During the development of our ontology, we repeatedly refined classes and properties to create an organic structure while maximizing the ontology's informativeness. We began by identifying all possible properties that could connect aesthetics with their elements, resources, influencers, and other related concepts. In the initial "draft" phase, we created over 100 properties. Step by step, we systematically refined them, removing or replacing properties with the most relevant ones. For instance, properties like `hasVisualElement`/`hasAudioElement` and similar were replaced with the more concise `characterizedBy`. Below you can explore the complete list of classes, subclasses, properties and their descriptions.

Core Classes Analysis:

Main Classes Describing Aesthetic

Core Aesthetic Elements

`Aesthetic` - the main class representing internet aesthetics

`AestheticElement` - components which characterize aesthetic

`AudioElement`

`VisualElement`

`Color`

`Material`

`Pattern`

Social Structure

`Community` - groups experiencing aesthetics
